## Ministry of Health, Labour and Welfare COVID-19 Contact-Confirming Application (Abbreviation: COCOA)

The contact-confirming application is a smartphone app that enables you to receive notifications about the possibility of contact with someone infected with the novel coronavirus.

- This app uses the short-range communication function (Bluetooth) on smartphones upon user approval to receive notifications about the possibility of contact with a person who has tested positive for the novel coronavirus, while ensuring anonymity for your privacy.
- Users can receive support, such as testing from a public health center, sooner, by knowing that they might have been in contact with someone who has tested positive. The more users, the more effective it will be in preventing the spread of infection.

### Possibility of contact within 1 meter for 15 minutes or more

- Contact records will be managed in the device only and do not leave the device.
- Where, when, and with whom there was contact will not be known by either side.
  - \*Information about the contact (random codes) is recorded within the device only.
  - \*Records are disabled after 14 days.
  - \*Contact information, location information and other information that could identify the individual are not recorded.
  - \*Information is not recorded when Bluetooth is turned off.
